# FLEXYLED AT6

- The new generation of flexible LEDs -

# HOMOGENEOUS LIGHT

## MILKY LOOK FLEXIBLE LED STRIP LIGHT

**FLEXYLED AT6** is a flexible, linear 24Vdc LED strip light with coating in milky look silicone material, ideal for recessed or surface installation.

### Milky Effect DIFFUSED SILICONE COATING

FLEXYLED AT6 is made with a new surface technology with **milky effect** diffused silicones. The opalescent finish of the silicone eliminates the characteristic dotting effect of the light emitting diodes, creating a homogeneous, natural projection of light.

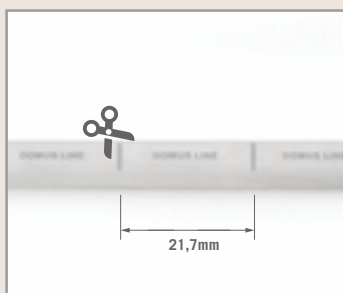

#### MINIMAL DESIGN AND FLEXIBILITY

FLEXYLED AT6 offers excellent illuminating performances and is ideal for installation along the edges of furniture, behind the head boards of beds and in all scenarios requiring a minimal, flexible lighting system.

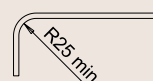

## APPEALING LIGHTING EFFECTS

### MODULARITY

FLEXYLED AT6 can be divided at 21.7 mm intervals. The double power cable configuration allows the cut part of any of the original modules to be re-used.

### HIGH-SEAL ADHESIVE BASE

FLEXYLED AT6 has a high-seal 3M<sup>®</sup> adhesive base and is suitable for recessed or surface installation. FLEXYLED AT6 is also supplied complete with fastening hooks and screws.

### PROTECTION LEVEL IP44

FLEXYLED AT6 is protected from splashes. The protection refers only to the luminaire and not to the connection system.
